Addr: University of Nebraska-Lincoln, 175 NE Hall, IMSE Department, Lincoln, NE, 68588, United States

Abst: The objective of this paper is to introduce and define Six Sigma concept within a supply chain environment. Six Sigma has been traditionally applied and implemented within a firm. However, with the emergence of supply chain management and inter-firm networks new definition of Six Sigma needs to be developed. The paper introduces a conceptual model for Six Sigma in a supply chain environment.
